

HOTEL GROUPS

One revenue platform for hotel groups.

Multi-property visibility on the same screens. Standardized analytics across the portfolio. White-label and Enterprise options for groups operating at scale.

Multi-property · standardized · white-label · API
access

GROUP-LEVEL WORK

One property = one kind of work. Ten properties = another.

Running revenue across multiple properties is operationally different from running it for one. Each property has its own PMS, its own seasonal patterns, its own competitive set. Pulling the group-level view together — today, in most chains — is a Monday-morning Excel exercise. We replaced that.

01

Inconsistent reporting

Property A's GM sends Excel. Property B's RM sends a PDF. Property C uses a different rate-shopping tool. Each report has different metrics, definitions, periods. The group-level review needs translation — every week.

02

Cross-property benchmarking

"Is property C's pickup good or bad?" depends on what comparable property A and B did. Without standardized analytics across the portfolio, the cross-property comparison is gut-feel.

03

Best-practice spread is slow

Property A's RM figures out a clever pricing approach. The chain learns about it three months later when it shows up in the year-end review. The 90-day delay between "someone discovered something useful" and "the other properties applied it" is pure leakage.

04

Multi-currency, multi-region

Properties in different currencies, different markets, different competitive sets. Group-level reporting wants one currency; property-level decisions need the local currency. Mixing it up loses information.

GROUP-SPECIFIC CAPABILITIES

Four places where portfolio work becomes visible.

01 – STANDARDIZED ANALYTICS

Same screens, every hotel

Every property runs the same Insight dashboards, the same report definitions, the same pickup tracking, the same forecast structure. Monday-morning translation work disappears — the GM at Property A and the GM at Property D look at the same metrics, named the same, computed the same. The group-level review starts on facts, not interpretation.

02 – MULTI-PROPERTY DASHBOARD

Group view + property drill-down

The Enterprise tier adds a multi-property dashboard — all your hotels side-by-side, with weekly KPIs, health indicators, and drill-down to per-property detail on click. Compare property C's pickup vs property A's pickup with one click. Roll up to a group total. Flag the property that's drifting before the year-end review surfaces it.

03 – CROSS-PORTFOLIO DECISIONS

What's working, propagated. What's coming, shared.

Decisions logged at one property are visible group-wide (with appropriate access controls). When property A's RM identifies a successful pricing approach for shoulder-season corporate, the decision audit makes it discoverable for property B's team. Best-practice spread happens in days, not quarters. The same logic runs on the Event Calendar — when any admin flags a market event, every subscribed property sees it.

04 – MULTI-CURRENCY REPORTING

Local for decisions, group for review

Each property reports in its local currency for property-level decisions. Group-level dashboards roll up to a single reporting currency (your choice). Multi-currency conversion uses ECB daily rates — historical data preserved at the rate active on the booking date, so historical reports stay stable.

WHAT YOU GET ACROSS THE PORTFOLIO

The full revenue lifecycle. **On every property.**

On top of the multi-property capabilities, every property gets the full Peaqlus platform — the same snapshot foundation, BI, Insights, Pulse AI, Decisions at every hotel.

THE FRAMEWORK

Signal → Decision → Action → Outcome

01

Signal

Insights at every property, group-level alerts.

02

Decision

Cross-portfolio decision audit, shared Event Calendar.

03

Action

Standardized pricing workflow, sales pipeline at every property.

04

Outcome

Per-property forecast accuracy, group-level revenue vs plan.

Portfolio-level view isn't an add-on — **it's the platform's base capability.**

ENTERPRISE PRICING

Group scale — contact sales.

Multi-property pricing scales with portfolio size, not as a per-property cost stack. The Enterprise tier includes the multi-property dashboard, white-label options, API access, and a dedicated success manager. Specific pricing depends on portfolio size, deployment model, and white-label requirements.

PROPERTY LEVEL

Every hotel on the Pro tier

Most group-member properties run on Pro (€334/mo under 49 rooms, €374 at 300+ rooms) — full Peaqplus platform on their own data. Property GMs and RMs get their own logins.

GROUP LEVEL

Multi-property dashboard

Central view of every property, weekly KPIs, cross-property comparison, drill-down. Single reporting currency with automatic FX conversion.

WHITE-LABEL OPTION

Under your brand

Peaqplus deployed under your logo, colors, domain. Multi-property dashboard for internal use. Useful if you're part of a customer-facing product or an operator group.

API ACCESS

Integration with your existing BI

REST API for all Peaqplus data. Integrate with existing BI tools (Tableau, Power BI), data warehouse, or internal dashboards. Dedicated success manager helps with deployment.

See Peaqplus on your group's data.

A 60-minute group demo: we walk through 2–3 of your properties on the live demo environment, demonstrate the multi-property dashboard, and discuss the deployment model that fits your group structure. Bring your central team and property-level operators.
